
BENJAMIN DOURTHE, PhD

AI Strategist & Machine Learning Leader | Digital Health & MedTech | Team & Program Builder

Palo Alto, CA, USA | +1 (650) 609 7072 | benjamin.dourthe@gmail.com | Bilingual: English & French

LinkedIn: linkedin.com/in/benjamin-dourthe | GitHub: github.com/bendourthe | Portfolio: benjamindourthe.com

SUMMARY

AI engineer specialized in building advanced harnesses that improve the performance, efficiency, and safety of agentic systems. Brings 12+ years across AI research, digital health, and MedTech, pairing hands-on depth in machine learning, computer vision, and signal processing (first-in-class wearable, implantable, and imaging systems taken from prototype to product) with enterprise leadership of generative and agentic AI: strategy, enablement, governance, and the tooling that makes AI-assisted development verifiable and validatable in a complex regulated environment. PhD-trained and research-grounded, known for fast, robust iteration, strong engineering discipline, and cross-functional leadership across software, engineering, clinical, and research teams.

CORE COMPETENCIES

Digital health & MedTech AI: biomedical sensing, medical imaging, digital biomarkers, wearables, implantables.

Agentic AI: platform rollout, prompt engineering, governance, security/compliance reviews.

Machine learning & deep learning: classification/regression, CNNs/RNNs, generative models, segmentation.

Computer vision & imaging: reconstruction, super-resolution (SRGAN), 2D/3D pipelines, quality optimization.

Time-series & signal processing: feature engineering, denoising, model robustness, generalization.

Production-grade Python: data pipelines, experiment tracking, code quality, automation, Git.

Leadership: hiring/interviewing, mentoring, roadmap delivery, stakeholder communication.

TECHNICAL SKILLS

Programming Languages: Python (primary), MATLAB, R, SQL, C, C++, Java, JavaScript, HTML/CSS.

Machine Learning & Deep Learning: scikit-learn, PyTorch, TensorFlow, hyperparameter optimization, model evaluation/validation, robustness testing, explainability.

Generative AI & Agentic Systems: Prompt and context engineering (advanced system prompts, reusable prompt frameworks), RAG design/build, org/team/project-specific skills; tools: Claude Code, OpenAI Codex, Gemini Enterprise, Cursor, Windsurf, GitHub Copilot, Deep Research.

Data, Signals & Imaging: NumPy, Pandas, SciPy, OpenCV, time-series analysis, feature engineering, multimodal data fusion, clinical-grade analytics.

DevOps, CI/CD & Engineering Practices: Git, testing, automation, CI/CD, documentation, reproducible research; architecture/branching strategies; data management for security/privacy/compliance; data & AI policy development.

Backend/Frontend & Full-Stack Foundations: APIs, backend and frontend frameworks, internal tooling and workflow automation for ops-heavy teams.

Domains: Digital health, MedTech, medical imaging, biomechanics, cardiac/pulmonary monitoring, wearables and sensor analytics; startup and early-stage product development.

PROFESSIONAL EXPERIENCE

STAFF MACHINE LEARNING ENGINEER, Supira Medical - Los Gatos, CA (2026 - Present)

MedTech company developing a next-generation percutaneous ventricular assist device designed to support cardiovascular function in high-risk patients.

- Led the modernization of the Supira Dataplatform, refactoring legacy code, resolving defects, and documenting the pipeline end to end to make data processing transparent and reproducible, establishing the verification and validation foundation required for the company's pivotal-stage clinical data.
- Hardened the platform's quality engineering by expanding automated test coverage and strengthening the CI/CD pipeline, turning V&V from a manual, point-in-time effort into a repeatable, gated process suited to a regulated pivotal-stage program.

- Lead company-wide AI enablement on AI tooling, workflows, and adoption across R&D, engineering, and regulatory functions. Administering access to agentic platforms, developing customized training programs, and contributing to cybersecurity assessments of new AI platform and model releases to maintain usage guidelines current.
- Architected a multi-platform agentic harness unifying agentic platforms under one standardized AI-driven development model, pairing scoped permissions and a structured audit framework with traceability so that AI-generated output is consistently verifiable and validatable for R&D in a regulated environment.

STAFF MACHINE LEARNING ENGINEER, Shifamed / Adona Medical - Los Gatos, CA (2024 - Present)

MedTech company developing adjustable cardiac shunt with implantable bi-atrial pressure monitoring systems.

- Lead the AI and Data Science operations and drove the enterprise rollout of generative and agentic AI systems (access management, policy, training, governance).
- Developed agentic data-processing and analytics pipelines plus custom team-specific applications across Software, EE, and R&D, and built an internal engineering toolkit containing hundreds of production-ready prompt and context-engineering templates.
- Engineered and validated signal-processing and machine learning algorithms for complex cardiac pressure data to support next-generation clinical tools and data infrastructure.

SENIOR MACHINE LEARNING ENGINEER, Nuralogix Corporation - Toronto, Canada (2022 - 2023)

Digital health company using computer vision for video-based physiological monitoring.

- Led end-to-end design and optimization of signal-processing and ML pipelines, improving video data quality by 25% and biometric prediction performance by 12% (internal benchmark) and engineered 100+ features for high-dimensional data representation and introduced robustness-focused evaluation and generalization strategies for real-world, multi-modal health data.

CHIEF DATA OFFICER, Tidal Medical - Toronto, Canada (2020 - 2022)

Startup developing first-in-class non-invasive wearable for real-time cardiopulmonary monitoring.

- Defined the data/AI architecture for a first-in-class non-invasive wearable for real-time pulmonary artery pressure monitoring, and pioneered deep learning for medical imaging enhancement (including SRGAN-based super-resolution) and redesigned signal-processing and computer-vision pipelines, improving algorithm efficiency by ~90% and enabling faster prototyping and more robust deployments.
- Built and led multidisciplinary teams, drove IP strategy and execution (1 PCT + 4 US provisional filings), and secured >\$2M in non-dilutive funding across national programs and grants.

MACHINE LEARNING ENGINEER (Postdoctoral), University of British Columbia - Vancouver, Canada (2020 - 2022)

- Designed and deployed deep learning models for medical image segmentation (multi-scale architectures) in collaboration with Medtronic and clinical stakeholders, improving accuracy and workflow efficiency for real-world clinical research.

COMPUTER VISION ENGINEER (Postdoctoral), Sunnybrook Research Institute - Toronto, Canada (2018 - 2020)

- Developed marker-less human motion analysis using deep learning and computer-vision, improving tracking accuracy by 35% and integrating multiple sensing modalities for real-time biomechanical analysis in research and clinical settings.

RESEARCH ENGINEER (PhD), KU Leuven - Belgium (2014 - 2017)

- Built patient-specific computational models and image-processing algorithms combining CT imaging with biomechanical simulation for 3D morphological feature extraction, stress mapping, and surgical planning.

EDUCATION

- **PhD, Biomedical Engineering** - KU Leuven, Belgium (2014 - 2017)

Thesis: Computational modeling of biological systems; developed patient-specific predictive models combining imaging and biomechanical simulation.

- **MSc, Science, Technology and Health** - University of Lorraine, France (2012 - 2013)
- **MSc, Mechanical Engineering** - National Engineering School of Metz (ENIM), France (2008 - 2013)
- *Visiting Scholar* - University of British Columbia, Canada (Fall 2016); University of Southern California, USA (Fall 2015)

HONORS & AWARDS

- Secured 3rd prize at the Dreamscape hackathon organized by AGI House, sponsored by Coatue and Mantis (Oct 2023)
- Toronto Health Stream Graduate, Creative Destruction Lab (CDL) (Jul 2022)
- Deep Space Healthcare Challenge, Canadian Space Agency (Jun 2022) (\$30,000)

- Research and Development Award, National Research Council of Canada IRAP (Apr 2022) (\$250,000)
- INOVAIT Strategic Innovation Fund, Sunnybrook Research Institute (Mar 2022) (\$125,000)
- Novel applications of AI and image reconstruction for respiratory and cardiac monitoring (VIP Program), ENCQOR (Dec 2021) (\$150,000)
- Demonstration Program, ENCQOR 5G (Nov 2021) (\$50,000)
- Project Grant, Canadian Institutes of Health Research (Sep 2021) (\$795,600)
- Collaborative Research and Development Grant, NSERC (Jan 2018) (\$100,920)
- European Research Foundation Conference Grant, Research Foundation Flanders - FWO (Jan 2017) (EUR 1,300)
- European Research Foundation Visiting Scholar Grant, Research Foundation Flanders - FWO (Jan 2016) (EUR 5,000)
- Conference Grant, Academische Stichting Leuven (Jan 2015) (EUR 500)
- European Research Foundation Visiting Scholar Grant, YouReCa Junior Mobility Programme (Jan 2015) (EUR 4,000)
- Ouvertud Scholarship, Region Lorraine (Jan 2011) (EUR 800)
- Government Scholarship, French Ministry of Higher Education and Research (2009-2013) (EUR 19,500)
- Corporate Scholarships, Group IRP Auto (2009-2013) (EUR 4,000)

PATENTS & PATENT APPLICATIONS

- System and method for respiratory monitoring - US Provisional 63/213,194 (2021)
- Method and system for electrical impedance tomography - PCT CA2021050649 (2021)
- Increasing effective sampling rate of EIT recordings to improve accuracy of pulse transit time measurements - US Provisional 63/303,963 (2022)
- Wearable radar sensing system - US Provisional 63/303,882 (2022)

CONFERENCE PRESENTATIONS & INVITED TALKS

- Using computer vision sensing technologies for anterior cruciate ligament injury screening, 18th annual Imaging Network Ontario Symposium, Toronto, ON, Canada (poster presentation, Mar 2020).
- Impact of self-selected customized orthotics on lower limbs biomechanics and fatigue, 14th biennial Footwear Biomechanics Symposium, Kananaskis, AB, Canada (oral presentation, Jul 2019).
- The influence of preference grouping methods on characteristics of recreational runners, 14th biennial Footwear Biomechanics Symposium, Kananaskis, AB, Canada (oral presentation, Jul 2019).
- Correlation between thumb cartilage properties and medical imaging, 8th World Congress of Biomechanics, Dublin, Ireland (poster presentation, Jul 2018).
- First steps towards the forward modeling of the thumb joint, 8th World Congress of Biomechanics, Dublin, Ireland (poster presentation, Jul 2018).
- Electromyography (EMG): technique, applications in Sports and Exercise Sciences, Shad Valley Workshop, Human Performance Laboratory, University of Calgary, Canada (Jul 2018).
- Osteoarthritis of the thumb joint: occurrence mechanism and understanding via medical imaging and computer modeling techniques, Human Performance Laboratory Musculoskeletal Biomechanics Seminar, University of Calgary, Calgary, Canada (Mar 2018).
- Mechanical properties of healthy trapeziometacarpal cartilage using indentation testing and contrast-enhanced computed tomography, 11th Symposium of the Hand and Wrist Biomechanics International, Brisbane, Australia (oral presentation, Jul 2017).
- Comparison between intra-articular contact patterns in the trapeziometacarpal joint of healthy and arthritic subjects, OARSI World Congress on Osteoarthritis, Las Vegas, NV, USA (poster presentation, Apr 2017).
- Validating thumb kinematics using dynamic CT & in vivo analysis of pathological joint function, Annual Meeting of the Nederlandse Anatomenvereniging, Luntenen, Netherlands (poster presentation, Jan 2016).

- In vivo contact stress evaluation in the trapeziometacarpal joint using finite deformation biphasic theory and mathematical modeling, 25th Congress of the International Society of Biomechanics, Glasgow, UK (poster presentation, Jul 2015).
- Contact patterns in the trapeziometacarpal joint during isometric tasks obtained via mathematical modeling, 21st Congress of the European Society of Biomechanics, Prague, Czech Republic (oral presentation, Jul 2015).
- Analysing thumb kinematics using dynamic CT: the native and pathological joint, 21st Congress of the European Society of Biomechanics, Prague, Czech Republic (poster presentation, Jul 2015).
- Mathematical modeling of the trapeziometacarpal joint for in vivo stress distribution analysis, 9th Symposium of the Hand and Wrist Biomechanics International, Milan, Italy (oral presentation, Jun 2015).
- The trapeziometacarpal joint: form and function of the native and diseased joint, Annual Meeting of the Nederlandse Anatomenvereniging, Lunteren, Netherlands (poster presentation, Jan 2015).

MENTORSHIP & TEACHING

- PhD student advisor, University of British Columbia (Jun 2020 - Dec 2022)
- Intern advisor, Tidal Medical (Aug 2020 - Nov 2022)
- Medical student mentor, University of Toronto (Dec 2018 - Jun 2020)
- Master student mentor, University of Calgary (Jan 2018 - Sep 2018)
- Undergraduate student supervisor, University of Calgary (Oct 2017 - Dec 2017)
- Teaching assistant, KU Leuven (Sep 2015 - Dec 2016)
- Project advisor, University of Southern California (Sep 2015 - Dec 2015)
- Student panel representative, National Engineering School of Metz (Sep 2009 - Jun 2012)

SIDE PROJECTS

- Prototyped an Android accessibility app for visually impaired users: voice-controlled photo capture with real-time scene descriptions from a generative AI model to support navigation and daily tasks (2023).
- Created a notebook for running Llama 2 locally for text generation (2023).
- Built a computer vision pipeline using YOLO + transfer learning for object detection and tracking (2021).
- Applied dense optical flow (Gunnar Farneback) to quantify motion from video (2020).
- Implemented face detection and tracking for images/videos using Haar cascades and tracking APIs (2019).
- Developed an SVM model to predict coronary heart disease risk; used SMOTE to address class imbalance and reduced type II error by 84% (2018).
- Built an NLP model (Naive Bayes) to classify news articles; achieved 94% accuracy (2017).

CONTINUOUS LEARNING & PROFESSIONAL DEVELOPMENT

- Build Interactive Agents with Generative UI, DeepLearning.AI (2026)
- Agent Skills with Anthropic, DeepLearning.AI (2026)
- Governing AI Agents, DeepLearning.AI (2025)
- Building Coding Agents with Tool Execution, DeepLearning.AI (2025)
- Agentic AI, DeepLearning.AI (2025)
- Claude Code: A Highly Agentic Coding Assistant, DeepLearning.AI (2025)
- Retrieval Augmented Generation (RAG), DeepLearning.AI (2025)
- Build Apps with Windsurf's AI Coding Agents, DeepLearning.AI (2025)
- Building Generative AI Applications with Gradio, DeepLearning.AI (2023)
- How Diffusion Models Work, DeepLearning.AI (2023)
- LangChain for LLM Application Development, DeepLearning.AI (2023)
- Building Systems with the ChatGPT API, DeepLearning.AI (2023)
- ChatGPT Prompt Engineering for Developers, DeepLearning.AI (2023)
- Fundamentals of Machine Learning for Healthcare, Stanford University (2022)
- Master the Coding Interview: Big Tech (FAANG) Interviews, Zero To Mastery Academy (2022)
- An Entire MBA in 1 Course, Chris Haroun (2021)
